SUMMARY

Full stack engineer who ships SaaS products end to end, from data model and API to CI/CD and monitoring. Currently lead engineering for three French company-formation products, including a multi-tenant incorporation platform (79+ jurisdictions) and an automated KYC and sanctions-screening pipeline. Strongest in TypeScript, NestJS, React/Next.js and PostgreSQL.

EXPERIENCE

Barakel (Koulier.com, Lexflow.fr, CorpSec)

Lead Full Stack Developer

Sep 2024 – Present

Kathmandu, Nepal (Hybrid), Full-time

Company-formation SaaS group for the French market. Joined as an engineer on Koulier.com, then built Lexflow.fr and CorpSec; now own architecture, infrastructure and delivery across all three, leading 5 engineers.

- **CorpSec platform:** Architected a multi-tenant company-incorporation platform covering 79+ jurisdictions (NestJS, Next.js, monorepo); in production since May 2026 with 18 paying clients. Jurisdiction rules are configuration driven, so new jurisdictions ship without core changes.
- **Compliance automation:** Built a self-hosted sanctions-screening service on the OpenSanctions dataset (refreshed nightly) used by CorpSec and Koulier, plus OCR-based KYC document extraction. Formerly manual ID, proof-of-address and sanctions checks now yield a 1–100 risk score per applicant, so compliance staff review only high-risk cases.
- **Lexflow.fr:** Built from scratch a company-formation platform for France: Flask API, white-labeled Next.js incorporation form deployed under ~12 partner brands, and a SvelteKit admin portal. Launched Sep 2025; 86 paying clients in its first 12 months.
- **Koulier.com:** Took over a registered-address service and led a complete UI overhaul; wired the KYC and risk-scoring pipeline into onboarding and automated ops and monitoring workflows with n8n. Supported growth from 20 to 250+ paying clients, working directly with the operations team and clients.
- **Support chatbot:** Built a pluggable RAG chatbot with human-agent takeover, reused across all three products; handles 50+ tickets per week.
- **Infrastructure & delivery:** Own production infrastructure on OVH Public Cloud: Docker Stack behind Caddy, GitHub Actions CI/CD, centralized logging (Dozzle), error tracking (Sentry) and uptime alerting. 99.99% uptime across all products; 10–12 production deployments per week.
- **Leadership:** Set technical direction and review code for a team of 5; run daily standups and monthly performance reviews.

Hyperce

Full Stack Developer

Aug 2023 – Jul 2024

Kathmandu, Nepal (Remote), Full-time

- Built a multi-location food-ordering platform on Vendure (NestJS) and Next.js, each restaurant a Vendure Channel with its own menu, roles and permissions, and Shift4 payments with POS integration; live across 40 US locations.
- Delivered 6 headless e-commerce projects for clients worldwide, with Stripe and FiskaPay payments and multi-currency checkout on several.
- Mentored 4 junior developers: assigned tasks, reviewed their code and acted as the bridge between the junior team and management in a fast-paced agency environment.

Unisala

Software Developer

Jul 2023 – Jan 2024

Nepal (Remote), Contract, part-time

- Fixed an API bottleneck caused by synchronous logging with an async, batched metrics bus (logger, Sentry, PostHog), cutting P95 latency 67% (858 ms to 247 ms) and raising throughput 31%.
- Migrated the frontend codebase from JavaScript to TypeScript, adding typed API contracts and Redux state, which cut runtime type errors reaching production.
- Built the cross-platform university search app (Ionic, React, Redux, Tailwind) for iOS, Android and web from one codebase.

Channakya Software

React Intern / Trainee

Sep 2022 – Jun 2023

Kathmandu, Nepal

- Built a task management system (React, Radix UI) with scheduled reminder emails sent via a Redis-backed job queue.
- Built a loyalty program for convenience stores where customers earn points on purchases, redeemable as discounts on future orders.
- Maintained the in-house frontend component library in an Nx monorepo and published reusable UI components to npm.

SKILLS

Languages & Frontend: TypeScript, Python, SQL; React, Next.js, SvelteKit, Ionic, Redux, React Query, Tailwind
Backend & Data: Node.js, NestJS, Vendure, Flask, GraphQL, Stripe; PostgreSQL, MongoDB, Redis, Prisma, TypeORM

Infra & Practices: Docker, GitHub Actions, CI/CD, Linux, Caddy, OVH Cloud, Sentry, n8n, Nx, Git; REST API design, system design, multi-tenant architecture, code review, Agile/Scrum

EDUCATION

Tribhuvan University (KCMIT, Kathmandu, Bagmati, Nepal) – Bachelor's in Computer Applications, 2026 (transcript pending)
